Follow UMe Pet Nutrition on 

DAILY FEEDING GUIDELINE FOR ADULT DOGS

Measure out the appropriate amount of dog meal according to the table below. Slowly add luke warm water as directed. Stir with a fork until a crumbly texture is obtained and serve immediately. The wet feed not consumed within an hour must be discarded and not kept and refed later. The quantities indicated in the table below are the daily feed requirement. If fed twice daily only use half of the required amounts per meal. Feed intake may vary according to individuals, health, age, activity, sex and environmental temperature.

Breed Size	Normal Activity gram/day	Water Addition ml/day
Toy breeds 1–5 kg	25 – 90	10 – 40
Small breeds 5–10 kg	90 – 150	40 – 70
Med breeds 10–20 kg	150 – 250	70 – 115
Large breeds 20–30 kg	250 – 340	115 – 155
Large breeds 30–40 kg	340 – 420	155 – 190
Large breeds 40–50 kg	420 – 500	190 – 225
Giant breeds 50–80 kg	500 – 710	225 – 320

1 Cup (250 ml) = 150 gram meal equivalent

Optionally, should you wish for variety, add 40-50 grams of fresh vegetables **OR** 20 grams of meat with every 100 grams of meal. UMe can also be used as an extender or gravy addition to the current kibbles or pellets you are feeding.

Introduce UMe Adult or Adult Pro gradually over a 7-day period to avoid digestive upsets.

If adding fresh food to the UMe serving, we recommend a mix of 60% UMe with 40% fresh fruits and vegetables. A list of recommended additions is available on the UMe website.

UMe dog food is a proudly South African company drawing on over 30 years of experience in the animal feed and supplements industry.
